BBAAC Training: Cloud ERP and ESG Accounting Workshop (5 November 2026)

27 NOVEMBER 2026

On 5 November 2026, undergraduate students in the Department of Accountancy participated in an interactive three-hour Cloud ERP and ESG Accounting Workshop and facilitated by industry specialists Ms. Danee Montecillo and Ms. Hachi Nguyen.

Stepping into the shoes of business operators through a live enterprise simulation, students gained practical, hands-on experience managing end-to-end financial workflows—from B2B and B2C sales, inventory, and automated bank reconciliation to real-time financial reporting. Students also explored integrated sustainability accounting, learning to track Scope 1, 2, and 3 carbon emissions and generate audit-ready Carbon Footprint reports directly from operational, HR, and procurement records.

Underscoring the Department's strong commitment to AI in accounting, the session demonstrated how intelligent cloud systems automate routine bookkeeping and empower future accountants to focus on higher-value strategic analysis. Building on enthusiastic student feedback, the guest facilitators will return in February 2027 to lead a specialized workshop on AI-enabled accounting applications for the Department's upcoming AI-focused course.
