## **1. Program Introduction**

The MSc in Business and Data Analytics (MScBDA) program aims to cultivate students with professional knowledge of business data analytics through active learning of the statistical and analytical methods, real-world business examples, and programming techniques. The program curriculum includes a wide range of knowledge areas such as applied statistics, big data management, data mining, social media analytics, economic and financial forecasting.

The MScBDA program has two streams. Typically, a student will be admitted to either the Quantitative Analysis for Business (QAB) or the Information Analytics Management (IAM) streams. For applicants interested in the QAB stream, please directly apply to the QAB stream through the application system.

The QAB program (Quantitative Analysis for Business), previously known as MScQAB or MAQAB, has a history of nearly 30 years. The current MScBDA (QAB) program has been developed to provide the modern quantitative skills that will facilitate business problem identification, analytical framework formulation, and statistical analysis in a wide range of areas in the finance industry, technology firms, and public sectors. Many of our graduates have held managerial positions in business and industrial sectors in Hong Kong. Recent graduate placements include many top companies in mainland China, including Tencent, ByteDance, Nielsen, Ernst and Young, Deloitte, Ping An Asset Management, etc.

The MScBDA (QAB) program offers comprehensive quantitative methods, including courses on applied regression analysis, data mining, predictive modeling in marketing, economic forecasting, and financial econometrics. The program benefits from training students through statistical programmings, such as SAS, R, and Python, and provides hands-on experience for data analytics. All our courses are self-contained and do not require previous programming experience from students. We teach students real-world business examples with relevant data analysis through hands-on programming exercises.

## **2. PROGRAMME STRUCTURE**

- 2.1 Academic Year is a period of 12 months starting in September of each year. The Academic Year consists of two semesters (A and B), each of 13-week duration and a Summer Semester of 7-week duration.**
- 2.2 The programme is composed of “courses”. Each course is assigned a number of credit units (CU) - usually three units for a one-semester course.**
- 2.3 In this programme, particular courses are designated as “prerequisite” or “precursors”. A “prerequisite” is a requirement that must be fulfilled before a student can register in a particular course. A “precursor” is not a requirement, but students are advised to complete the corresponding precursors before registering in a course.**
- 2.4 Table 1 – “List of Courses” shows the titles of these 15 courses in the programme.**

**Table 1: List of Courses**

| Pre-requisite(s) | Programme Core Courses Code & Title                                                         | Credit Units |
|------------------|---------------------------------------------------------------------------------------------|--------------|
| -                | IS5413(#) Database Management Systems                                                       | 3            |
| -                | IS6335 Data Visualization                                                                   | 3            |
| -                | MS5217 Statistical Data Analysis                                                            | 3            |
| MS5217           | MS6711(#) Data Mining                                                                       | 3            |
|                  | <u>Stream Core Course Code &amp; Title</u>                                                  |              |
| MS5217           | MS5218 Applied Linear Statistical Models                                                    | 3            |
|                  | <u>Elective Courses</u>                                                                     |              |
|                  | 5 elective courses in which at least 4 courses must be selected from the following courses: |              |
| -                | MS5215 AI-Enhanced Business Analytics with Excel and Python                                 | 3            |
| MS5313 or MS5216 | MS5216 Decision Analytics                                                                   | 3            |
| -                | MS5223 Project Management                                                                   | 3            |
| -                | MS5318 Predictive Analytics with Excel and R                                                | 3            |
| -                | MS6211 Statistical Modelling in Risk Management                                             | 3            |
| MS5218           | MS6219(#) Predictive Modeling and Forecasting for Business                                  | 3            |
| MS5218           | MS6221(#) Predictive Modeling in Marketing                                                  | 3            |
| MS5218           | MS6601 Statistical Modelling in Economics and Finance                                       | 3            |

| -                | EF5560 Fintech and AI in Finance                                                            | 3            |
|                  | CB Elective                                                                                 |              |

**Key : (#) = CEF reimbursable course**

### 3. **CREDIT TRANSFER**

A maximum of 6 credit units can be transferred to the programme. Applications for credit transfer for the work completed prior to entry to the University must be made before the start of the first semester according to the deadline set by the University. **The application deadline is 28 August 2026.** Applications for credit transfer for outside work completed after admission to the University must be made immediately in the semester following attainment of the additional qualification. For information on the application procedures, please visit website <https://www.cityu.edu.hk/sgs/student/tpg/records/credittransfer>.

#### **4. PROGRAMME MANAGEMENT AND COMMUNICATION**

##### **4.1 Programme Committee**

Academic policy and decision making relating to the programme are the responsibilities of the Programme Committee which considers such matters as entry qualifications and admission policy, curriculum, teaching methods, assessment and examination regulations. The Committee is also responsible for the monitoring and evaluation of the effectiveness of the programme to ensure that the academic objectives of the programme are achieved.

##### **4.2 Communication Channels**

The following channels of communication between students and the department are available:

- (a) Students who are having academic difficulties with a course should speak directly to the instructor of that course.
- (b) A student wishing to discuss the organisation of the programme should speak to the Programme Leader.
- (c) Students are also represented in the Programme Committee.

## **APPENDIX B**

### **COURSE DESCRIPTION**

#### **Core Courses**

##### **IS5413      Database Management Systems**

This course aims to introduce the basic concepts of database systems. It covers the methods and tools for the conceptual and logical design of database applications, and relational database models and languages for the physical design and implementation of database systems.

##### **IS6335      Data Visualization**

The goal of this course is to learn how to use visualization tools for data interpretation under the business context. We will explore ways to organize and derive meaning from vast amounts of data, with interesting visual examples from different application areas. Students will learn concepts, methods, and applications of data visualization methods. Students will also learn visualization tools from GUI-based Tableau software to more advanced programmable visualization packages in R and Python. They will be guided in creating engaging and interactive visualizations, as well as experiencing virtual reality applications. Students will apply the concepts and skills to designing a final project.

##### **MS5217      Statistical Data Analysis**

This course covers fundamental statistical concepts and necessary computational tools in data analysis. The goal is to learn how to perform descriptive, analytical, and predictive data analysis based on the real-world problems. This course also serves as a quantitative foundation for elective courses in marketing, finance, economics, and more advanced data science courses.

##### **MS5218      Applied Linear Statistical Models**

The aims of this course are to introduce the statistical concepts and methodology of linear statistical models. The curriculum emphasizes the use of regression modeling and analysis of variance techniques in solving business problems. Develop students' analytic ability to integrate and apply the knowledge and quantitative skills, in particular linear statistical model methods, gained in the course to solve business problems. Provide students with the opportunity to develop their skills in presenting the findings of their own project.

**MS6711      Data Mining**

**This course introduces students to a range of popular and practical data mining and machine learning algorithms relevant to business applications. Students are required to perform data analysis using the python programming language. Upon successful completion of this course, students will have acquired the core foundational knowledge in the field, and be well-prepared for a wide variety of careers in data-analytics.**

## **Elective Courses**

### **MS5215      AI-Enhanced Business Analytics with Excel and Python**

This course aims to equip students with a set of modeling skills and data analytical tools based on spreadsheet that enable them to address complex business problems. The content covers basic and advanced spreadsheet techniques, VBA programming and their business applications. Students will learn how to develop and use spreadsheet effectively for business analysis, and how to utilize data and models to derive insights and make better decisions.

### **MS5216      Decision Analytics**

This course aims to train students' skills in modelling and optimization that are essential in turning real-world business decision-making problems into mathematical models and developing solution methods using computer packages such as spreadsheets, R/Python. It serves as a foundation course for business analytics, and covers commonly used optimization methods in business applications, including linear programming, and nonlinear optimization. It also introduces application of the optimization methods to a wide range of problems, including statistical estimation, machine learning, and business decision making under uncertainty.

### **MS5223      Project Management**

This course aims to introduce fundamental concepts of project management, with an emphasis on the trade-offs involved; provide students with the tools and methodologies developed to assist project managers; enable students to apply the concepts and tools of project management through assignments, project, and case studies.

### **MS5313      Managerial Decision Modeling**

Serving as a foundation course for developing advanced analytical and planning skills, this course aims to sharpen students' ability to creatively design, formulate, and construct quantitative models for managerial decision problems. Specifically, this course is intended to provide students with the key concepts, knowledge, and tools to use data, analytical models and information technology to support practical managerial decision-making. Develop students' basic skills and hands-on experiences to uncover useful information and to analyse various business decision problems. Expose students to the practical cases of how quantitative modelling and analysis skills have generated significant business values and competitive advantages.

### **MS5318      Predictive Analytics with Excel and R**

The aim of this course is to introduce the statistical concepts and methodologies that are often associated with making predictions with data.

We begin with fundamental statistical analysis (e.g. inference, simple regression), then adds both breadth (e.g. logistic regression) and depth (e.g. model selection) to the use of regression to find the best prediction model for business forecasting. You will learn how to build predictive models with data sets in various structures (e.g. quantitative or categorical response/predictors). You will understand the trade-off between over-predicting versus under-predicting. You will practice utilizing the learned methods to solve data-based business decision problems (e.g. healthcare operations, fraud detection) through examples and case studies. R language will be used to process data and generate prediction models. No prior statistical knowledge is required, and you do not need prior knowledge about Excel or R.

**MS6211      Statistical Modelling in Risk Management**

This course aims to prepare students with business knowledge of risk management with emphasis on operational risk management, credit risk management, and financial risk management; develop students' modelling and computing skills to create and evaluate credit scorecards.

**MS6219      Predictive Modeling and Forecasting for Business**

This course aims to introduce students to a range of forecasting techniques used in business and economics; develop a solid conceptual understanding of these techniques; enable students to appreciate the practical relevance of the techniques through case studies; acquaint students with the necessary computing knowledge to execute an analysis.

**MS6221      Predictive Modeling in Marketing**

The goal of the class is to provide a broad overview of modern data-driven marketing techniques. We will cover the main areas of marketing that require data-driven decisions — targeted promotions and advertisements, churn management, recommender systems, pricing, and demand prediction. The emphasis is on applied predictive modeling in Python, and how machine learning tools are employed in the data science industry. The prerequisites include one course in probability and statistics and one course in regression analysis. Students are expected to work at least 5 hours after every lecture.

**MS6601      Statistical Modelling in Economics and Finance**

The goal of the class is to introduce financial econometrics: the intersection of statistics and asset pricing. We will cover a wide range of topics, including linear and nonlinear time series, volatility modelling, multivariate time series, and factor models. Particularly, we will discuss how factor-based investing and machine learning are employed in the investment industry. The prerequisites include one course in probability and statistics, one course in regression analysis, and basic knowledge in

time series models. Students are expected to work at least 5 hours after every lecture.

**MS6712 Contemporary Topics in Quantitative Analysis for Business**

This course aims to extend the knowledge of students in the use of quantitative analysis and to further develop students the practical skills of some advanced quantitative techniques for business decision problems.

**EF5560 Fintech and AI in Finance**

This course offers a comprehensive introduction to Bitcoin, cryptocurrencies, and quantitative investment strategies powered by machine learning and AI. The first part demystifies the fundamentals of blockchain technology, Bitcoin mechanics, and the evolving crypto ecosystem. The second part focuses on applying data-driven techniques, including machine learning models and AI algorithms, to analyze financial markets and build quantitative investment strategies. Designed for students without prior experience, this course blends theory, and practical insights to equip learners with foundational knowledge and hands-on skills in emerging financial technologies and advanced quantitative methods.
